

AI_Ecommerce_Revenue_Optimizer – Product Requirements Document

Overview

AI-driven product initiative aligned with Amazon Marketplace Analytics analytics to optimize decision-making and user value.

Problem Statement

Current analytics are descriptive but lack predictive and prescriptive intelligence.

Goals & Success Metrics

Increase revenue 15%, improve retention 10%, reduce churn 8% within 12 months.

User Stories

As a product manager, I want AI-generated insights so that I can make faster and more accurate decisions.

Privacy & Ethics

GDPR/CCPA compliance, anonymized data pipelines, opt-in consent.

Risks & Mitigation

Bias audits, human-in-the-loop validation, rollback strategies.

Generative AI Capabilities

This product integrates Generative AI to provide automated insights, content generation, predictive recommendations, and natural language query capabilities. The system leverages large language models (LLMs) to summarize analytics, generate executive reports, auto-draft product briefs, and deliver conversational analytics for stakeholders.

Use Cases:

- Auto-generated KPI summaries for leadership
- Natural language dashboard querying
- Automated experiment report generation
- Personalized user messaging and onboarding flows
- AI-assisted backlog grooming and user story drafting

Model Governance:

- Prompt safety filters
- Human-in-the-loop approvals
- Bias detection pipelines
- PII masking and encryption
- Audit logging for generated outputs
